

INFECTION CONTROL IN HEALTHCARE CONSTRUCTION

Design and construction of healthcare facilities
requires adherence to infection control principles

Early planning in construction and renovation projects must integrate infection prevention and control (CSA Z317.13-12)

Plan for Disease Prevention

IPAC Consulting brings infection control experience and expertise to all phases of healthcare facility construction and renovation interacting with several team members including:

- Architects
- Engineers
- Consultants
- Clinicians/Users/Owners

Our team of infection control experts will ensure that the designers, builders and users of healthcare facilities are provided with state-of-the-art infection control regulations and recommendations to ensure their facility is in compliance with the most recent infection control requirements and standards.

The IPAC difference

“Design professionals, including architects and engineers, shall be responsible for providing design and construction documentation that meets the requirements of this Standard and the infection prevention and control objectives of the health care facility.” (CSA Z317.13-12 pg 32)

IPAC Consulting has industry leaders including nurses with infection control certification (CIC), infection diseases physicians, microbiologists, and health and safety experts. Our experts are current on the most up-to-date sources of infection control information from CSA regulations to AIA recommendations and Canadian infection control guidelines.

Our experienced team can provide the right information in the format you require at the time you require it. Our breadth of knowledge provides state-of-the-art solutions and recommendations that can go beyond the scope of regulations.

Design and build with experience on your team!

Our mission is to prevent unnecessary deaths by reducing the spread of disease in health care facilities.

The design and construction of healthcare facilities now requires adherence to infection control principles which were unknown just a few years ago. IPAC Consulting specializes in advising architects, engineers, builders and their clients on compliance with current regulations, guidelines and recommendations for infection control.

IPAC Consulting is available to assist in the planning, building and commissioning of:

- Hospitals
- Dental Clinics
- Community Health Centres
- Primary Care Offices and Clinics
- Outpatient Surgery Centres
- All healthcare professional offices

IPAC Consulting would be pleased to speak to you about joining your team for your next project. We can provide accurate and comprehensive quotes and schedules for your infection control consultation needs. Call us: 226-228-5550
